

Validated Sediment Samples from 8/10/15, 8/12/15, and 8/13/15

Twenty-one (21) sediment samples were collected from nine locations from Monday August 10th, 2015, Wednesday August 12th, 2015, and Thursday, August 13, 2015, along the Animas and San Juan Rivers. These screening levels are for dry weight soil/sediments. The metal concentrations of the sediment samples were over a factor of 10 lower than soil/sediment recreational screening levels.
